

Let's Talk About Children and Neurodiversity

Neurodiversity refers to the natural variation in brain function and development. This means that children may have different ways of thinking, learning, and processing information.

Autism Spectrum Disorder

ASD is a developmental disorder that affects social interaction, communication, and behavior. Kids with ASD may have difficulty with social cues, language, and repetitive behaviors.

Attention Deficit Hyperactivity Disorder

ADHD is a disorder that affects attention, hyperactivity, and impulsivity. Kids with ADHD may have difficulty with focus, organization, and impulse control.

Dyslexia

Dyslexia is a learning disorder that affects reading ability. Kids with dyslexia may have difficulty decoding words, spelling, and reading comprehension.

Dyspraxia

Dyspraxia is a disorder that affects movement and coordination. Kids with dyspraxia may have difficulty with gross motor skills, fine motor skills, and planning and executing movements.

Sensory Processing Disorder

SPD is a condition that affects the way in which the brain processes sensory information. Kids with SPD may be over or under-responsive to certain sensations, leading to discomfort or distraction.

We all learn differently, and that's okay!

Talking about neurodiversity helps us understand and appreciate children's unique strengths and challenges.
